Performance Reporting & General Ledger on Demand

Job Description

Experience: 4-6 Years
Designation: Senior Engineer - DevOps
Location: Pune

Key Responsibilities:

- Manage and support AWS cloud infrastructure across Dev, UAT, and Production environments
- Implement and maintain CI/CD pipelines for reliable and automated deployments
- Automate infrastructure provisioning using IaC tools such as Terraform or CloudFormation
- Monitor system performance, availability, and reliability, and proactively address issues
- Support production stability, incident resolution, and root cause analysis
- Optimize AWS resource utilization and cost efficiency
- Collaborate with engineering teams to improve deployment and operational processes

Required Skills:

- Strong hands-on experience with core AWS services (EC2, S3, Lambda, RDS, IAM, CloudWatch, VPC)
- Experience with CI/CD tools such as Bitbucket Pipelines, Jenkins, or GitHub Actions
- Experience with infrastructure automation (Terraform, CloudFormation, or similar)
- Strong Linux fundamentals and scripting experience (Shell/Python preferred)
- Experience with monitoring, logging, and alerting

Preferred Skills:

- Experience with Docker and container orchestration (ECS/EKS)
- Experience with AWS cost optimization and performance tuning
- Exposure to production support environments
